

# Let atom Alliance Help You Host a Flu Shot Clinic

Influenza vaccinations have been shown to effectively prevent hospitalizations and death among persons aged 65 and older as well as in persons aged 18-64 with medical conditions that increase the risk for influenza related complications.

Providing an on-site seasonal flu shot clinic is a proven way to prevent individual cases and the spread of seasonal flu. Pharmacies are willing to come onsite to provide seasonal flu vaccination in order to increase vaccination rates within the community.

Please contact our Quality Improvement Advisor in your state to help you improve the immunizations rates for your community's population by hosting a clinic this flu season. atom Alliance staff will coordinate with a pharmacy to make your flu shot clinic a success!

Together, we will explore vaccination models that have shown a marked increase in adult immunization rates.

Historically, immunization rates among adults have been low; however, atom Alliance aims to change that by working with practitioners, providers, and beneficiaries to:

- implement evidence-based practices and systems changes to improve routine assessment of patients' vaccination status,
- improve immunization rates, especially in racial and ethnic minority populations, rural Medicare beneficiaries and dual-eligible Medicaid and Medicare beneficiaries, and
- increase documentation of Medicare beneficiary immunization status in immunization information systems (IIS) where available for adult patients
